A health presentation by UPMC

BELLY BASICS: DIGESTION & MORE!

Friday, Nov. 16
12 to 2 p.m.

12 p.m. Hot lunch and
free screenings

1 p.m. Presentation

UPMC McKeesport

1500 Fifth Ave.
McKeesport, PA
Kelly Conference Center
Ground Floor, Kelly Building

After your skin, the football-sized liver is the body's largest organ, performing more than 200 vital tasks. Tucked under it is the gallbladder, which stores and secretes the bile your liver creates.

Join UPMC McKeesport's **Alex Myint, MD**, to learn about liver and its related diseases such as Hepatitis C, cirrhosis, and fatty liver. General surgeon **Christine Kinnier, MD**, will discuss the role of the gall bladder — and why its removal ranks among the most commonly performed surgeries in the country.

Learn what you can do to keep both functioning at their best — and what steps to take when they aren't.
