As UPMC’s tertiary care center north of Pittsburgh, this state-of-the-art hospital offers UPMC’s brand of world-class medical care at two convenient campuses in McCandless and Cranberry to serve the communities and counties north of the city.

Our Mission and Vision

Our Mission
To enhance the health of the communities we serve through clinical service excellence.

Our Vision
UPMC will lead the transformation of health care. The UPMC model will be nationally recognized for redefining health care by:

• Putting our patients, health plan members, employees, and community at the center of everything we do and creating a model that ensures that every patient gets the right care, in the right way, at the right time, every time.
• Harnessing our integrated capabilities to deliver both superb state-of-the-art care to our patients and high value to our stakeholders.
• Employing our partnership with the University of Pittsburgh to advance the understanding of disease, its prevention, treatment and cure.
• Serving the underserved and disadvantaged, and advancing excellence and innovation throughout health care.
• Fueling the development of new businesses globally that are consistent with our mission as an ongoing catalyst and driver of economic development for the benefit of the residents of the region.

Our Values

Quality and safety
We create a safe environment where quality is our guiding principle.

Dignity and Respect
We treat all individuals with dignity and respect.

Care and Listening
We listen to and care for our patients, our health plan members, our fellow employees, our physicians, and our community.

Responsibility and Integrity
We perform our work with the highest levels of responsibility and integrity.

Excellence and Innovation
We think creatively and build excellence into everything that we do.
Our Signature Services

**UPMC Passavant Heart and Vascular Center**
UPMC Passavant’s approach to heart care allows for daily collaboration by cardiologists, vascular surgeons, and cardiothoracic surgeons. Cardiac services range from basic diagnostic testing to advanced imaging, electrophysiology, catheterization procedures, highly advanced open heart surgery, and cardiac rehabilitation. The center has been nationally recognized for exceeding benchmarks for quality and patient outcomes.

**UPMC Hillman Cancer Center at UPMC Passavant**
UPMC Hillman Cancer Center at UPMC Passavant is an associated program of the University of Pittsburgh Cancer Institute, the region’s only National Cancer Institute-designated Comprehensive Cancer Center. This association enables UPMC Passavant to offer cancer-fighting tools that previously were not available outside major university medical centers, including treatment such as intensity-modulated radiation therapy (IMRT), the most advanced radiation therapy available. Our radiation oncologists and surgical oncologists work with our network of medical oncologists in northwestern Pennsylvania to offer cancer patients advanced diagnosis and treatment close to home. Patients benefit from a team approach and have access to support services, such as nutrition counseling, stress management, and support groups.

The Comprehensive Breast Center at our Cranberry campus provides patients with access to state-of-the-art diagnostic equipment, including digital mammography and MRI-guided breast biopsy, as well as access to breast cancer specialists, all in one convenient location.

**UPMC Outpatient Center Wexford**
UPMC Outpatient Center Wexford offers an interdisciplinary approach to patient care, including evaluation, testing, treatment, and rehabilitation for a wide variety of spinal problems. We provide our patients with truly comprehensive care by combining highly advanced imaging and diagnostics, cutting-edge treatments, and a multidisciplinary team of specialists. Because of our innovative approach to the diagnosis and treatment of spinal conditions, our spine program is one of the busiest in the region.

Our nationally respected surgeons apply the latest minimally invasive techniques to neck and spine procedures at nearby UPMC Passavant-McCandless. The surgeons, doctors, and therapists at the Spine Center provide comprehensive pre-and post-operative care to help maximize the success of our patient’s surgical procedure.

**UPMC Passavant Gastrointestinal (GI) Center and Colon Services**
The GI Center at UPMC Passavant is designed to be the best in the region in terms of patient-centered care; patient satisfaction; state-of-the-art services, equipment and technology; and excellence in patient safety and quality outcomes. Twenty-six private rooms, used for both pre-procedure and recovery, will provide patients with the privacy and comfort they deserve. In addition, the GI Center houses eight procedure rooms plus a dedicated pulmonary/bronchoscopy suite. Advanced diagnostic and treatment capabilities include BARRX, Bravo, single balloon enteroscopy, and navigational bronchoscopy.

At the Colon and Rectal Clinic we treat colon and rectal cancers, ulcerative colitis, Crohn’s disease, diverticulitis, and other benign diseases of the small bowel, colon, rectum and anus. Using sophisticated technology, new therapies, and minimally invasive surgeries, our experts can help you return to leading a normal lifestyle.

**UPMC Magee-Womens Hospital Specialty Services at UPMC Passavant**
Ranked among the top seven hospitals in the nation for gynecologic care, UPMC Magee-Womens Hospital is a National Center of Excellence in Women’s Health, one of the first recognized by the U.S. Department of Health and Human Services. That expertise is now available through Magee’s program at UPMC Passavant, which offers women’s world-class specialty services, including gynecologic oncology and urogynecology, as well as minimally invasive gynecologic surgery. We also offer advanced laparoscopic surgery, an endometriosis center, and robotic-assisted surgery, which can result in less scarring, minimal blood loss, and quicker recovery time.

**Robotic Surgery at UPMC Passavant**
UPMC Passavant is proud to offer the da Vinci Surgical System®, a robotic surgical system designed to facilitate surgery using a minimally invasive approach. The da Vinci robot allows surgeons to perform procedures involving complex dissection or reconstruction. A robotic procedure can offer patients many potential benefits including less pain, blood loss or need for blood transfusions. Robotic patients can have a shorter stay in the hospital, quicker recovery and a faster return to normal daily activities. With the recent addition of the Xi System there are now 2 robots which will allow expansion of the services provided currently including general surgery, gynecological, urological, thoracic and colon and rectal procedures.
