Magee-Womens Specialty Services at UPMC Passavant–Cranberry

Bringing the best in women’s health care to Pittsburgh North

UPMC Passavant
A Message to Our Community

In our region, we are fortunate to have Magee-Womens Hospital of UPMC — one of the country’s top-ranked medical and research centers for women’s health care — so close by. And, thanks to an exciting new partnership with UPMC Passavant–Cranberry, women of all ages in Pittsburgh’s northern communities now can enjoy even greater access to Magee’s trusted expertise.

Magee-Womens Specialty Services at UPMC Passavant–Cranberry features a wide range of comprehensive diagnostic, surgical, and outpatient services, led by specialists who are recognized innovators and leaders in women’s health. Services are delivered right on UPMC Passavant’s Cranberry campus in a suite designed especially with the comfort of women in mind.

Whether you’re an adolescent preparing for your first gynecological examination ... a mother-to-be readying for childbirth ... or a midlife woman going through menopause, you’ll find expert, high-quality medical care focused on your unique needs during this special time of your life.

For generations, our hospitals have proudly served women with respect and dignity. Magee-Womens Specialty Services at UPMC Passavant–Cranberry continues that tradition of patient- and family-centered care, supporting your health needs and quality of life in every way.

Magee-Womens Specialty Services at UPMC Passavant–Cranberry

From annual checkups and preventive care to testing, diagnosis, state-of-the-art surgery, and advanced treatments, Magee-Womens Specialty Services at UPMC Passavant–Cranberry offers you the best in women’s health care — close to your home or workplace.

Magee’s specialists will work collaboratively with your primary care doctor or specialist to provide seamless, individualized treatment.

Our spectrum of services includes:

- Breast Surgery
- General Obstetrics & Gynecology
- Gynecologic Oncology
- Maternal-Fetal Medicine
- Midlife Health Services
- Midwifery
- Minimally Invasive Gynecologic Surgery
- Reproductive Endocrinology and Infertility
- Urogynecology Services
- Women’s Imaging Services
Breast Surgery

“Our comprehensive breast program focuses on diagnosing and treating breast disorders, especially breast cancer, using the latest techniques and informed by best practices and research.”

-Gretchen Ahrendt, MD
Co-Director, Comprehensive Breast Surgery Program
Magee-Womens Hospital of UPMC

Magee has played a leading role in many of the recent, dramatic advancements in the diagnosis and treatment of breast cancer. Women now have access to innovative, less invasive breast surgery options that can mean less scarring, faster healing time, and better cosmetic results.

When you are referred to the breast surgery program at UPMC Passavant–Cranberry, you’ll undergo an initial evaluation, including a physical examination and complete clinical breast exam. If you require additional treatment, our nationally recognized, board-certified breast surgeons and multidisciplinary team of doctors will work with you to develop a comprehensive, personalized plan of care.

More Options for Women
Breast surgery options available at UPMC Passavant–Cranberry include:

- Lumpectomy — selective removal of the tumor from the breast
- Mastectomy — surgical removal of all breast tissue
- Oncoplastic surgery — reshaping of the breast after a lumpectomy or partial mastectomy
- Sentinel node biopsy — removal of the main (sentinel) lymph nodes in the underarm (axilla) to test for cancer
- Tissue expanders and implants — a multistep process used as part of breast reconstruction after a mastectomy
Gynecologic Oncology

“Gynecologic cancers should be treated by a specialist with advanced training and demonstrated competence, such as a gynecologic oncologist. Research has shown that women who receive care first from a gynecologic oncologist experience better outcomes.”

- John Comerci, MD
  Vice Chair, Women’s Health Service Line, Specialty Services
  Magee-Womens Hospital of UPMC

Gynecologic cancer and its treatment can affect all aspects of your life. At Magee, our board-certified doctors are trained to diagnose and treat different types of cancer of the reproductive system.

At Magee and UPMC — leaders in cancer care in the United States — our blend of clinical expertise and innovative research dedicated to gynecologic cancer prevention and treatment ensures that you will receive the most comprehensive care available.

The Magee-Womens Gynecologic Cancer Program of UPMC CancerCenter brings together a multidisciplinary team of gynecologic oncologists, medical oncologists, surgical oncologists, radiation oncologists, research and behavioral scientists, and clinical staff — all committed to providing you with the most comprehensive gynecologic cancer care available.
Women’s Imaging Services

We feature a high level of specialized imaging services to meet the individual needs of women. Here, you’ll have access to the most advanced imaging technology, plus board-certified doctors and a dedicated, specially trained staff focused on giving you personalized care in a comfortable setting.

Our skilled specialists use advanced imaging technology for fast, high-quality readings that can lead to more accurate diagnoses and treatments.

The specialized imaging services available at our Cranberry location include:

- Bone density scans (DXA)
- Breast imaging (including digital mammography, radioactive seed localization, and ultrasound-guided and stereotactic biopsies)
- Breast ultrasound
- OB ultrasound

For your convenience, we offer extended hours and same-day, early morning, and weekend appointments, as well as free parking.

“Working together with you and your doctor, our caring and highly qualified staff are able to integrate your imaging results into a seamless plan of care.”

-Terri-Ann Gizienski, MD
Breast Imaging Specialist
UPMC Passavant-Cranberry

At Magee-Womens Specialty Services in Cranberry, we provide compassionate and individualized care for gynecologic cancers, including cancers of the:

- Cervix
- Ovaries, peritoneum, and fallopian tubes
- Uterus
- Vagina
- Vulva
Maternal-Fetal Medicine

Not all pregnancies are routine. During a complicated pregnancy, maternal-fetal medicine doctors provide specialized, compassionate care or consultation for both mother and unborn child.

If you are an expectant mother with chronic health problems — or if unexpected problems develop during your pregnancy — our maternal-fetal specialists work together with obstetricians, certified nurse midwives, and your family to keep you healthy before, during, and after pregnancy.

Conditions that can result in a high-risk pregnancy include heart disease, high blood pressure, preeclampsia, diabetes, thyroid disorders, and kidney disease, as well as early labor and bleeding.

You also may need to see a maternal-fetal medicine specialist when carrying multiples, because of the increased risk for preterm birth, or after experiencing recurrent pregnancy loss. Specialized care also is provided when birth defects and growth problems are detected in the fetus.

Maternal-Fetal Medicine Services

- Diagnostic testing
- Direct care for complicated situations before and during pregnancy
- High-risk pregnancy management
- Preconception consultation

“Our specialized maternal-fetal medicine services — offered by leading experts in preterm birth and high-risk pregnancy research — help ensure the most favorable outcomes for mothers and their babies.”

-Arundhati Jeyabalan, MD
Clinical Director, Maternal-Fetal Medicine Practice
University of Pittsburgh/Magee-Womens Hospital of UPMC
Midlife Health Services

“We work with each woman to maximize her health, well-being, and quality of life through the menopause transition and beyond.”

-Mary Beth Peterson, MD
Director, Midlife Health Center
Magee-Womens Hospital of UPMC

Midlife is a time of natural transition in a woman’s life. It brings major changes as her body prepares for menopause and the end of her reproductive years. Like other phases of life — adolescence, pregnancy, and postpartum — the body must adjust to different levels of hormones.

Our midlife health services program, offered through Magee-Womens Specialty Services at UPMC Passavant–Cranberry, can help you prepare for menopause, navigate the changes, and embrace the many years of good health and joy to come. Our doctors from the Women’s Midlife Health Center at Magee offer specialized care for women in premature menopause, perimenopause, and menopause.

We provide expertise in the management of menopausal symptoms, such as hot flashes, night sweats, insomnia, vaginal dryness, and decreased sexual desire. We provide well-woman gynecologic care for midlife women who are healthy, as well as women with more complex needs.

Symptoms We Treat
We specialize in addressing the health care and concerns of women over 35, including:

- Bleeding
- Hormone imbalance related to menopause
- Hot flashes/night sweats
- Irregular bleeding
- Menopause
- Pain with intercourse
Midwifery

If you have no health problems or pregnancy complications, a midwife could be an excellent option for you and your family when having a baby. Our unique approach allows the birth of your new baby to occur naturally and safely, while minimizing unnecessary interventions.

Magee midwives are specially trained to support you, your baby, and your family throughout your pregnancy and delivery. Our goal is to provide sensitive, skilled care focused on education and prevention. Our certified nurse midwives (CNMs) are board-certified, independent health care practitioners who are licensed in both nursing and midwifery. They work collaboratively with doctors, participate in continuing education programs, and maintain professional liability insurance.

Other Services

In addition to providing care through labor and delivery, we offer a full range of services, including:

- Cancer screening
- Complete prenatal care
- Family planning
- Gynecologic care
- Menopause counseling
- Treatment and counseling for sexually transmitted diseases
- Yearly physicals

“We focus on the whole woman and the natural process in a woman’s life, especially during pregnancy. Our role is to safeguard the health of you and your newborn while encouraging family participation through informed decision making about care.”

-Suzanne E. Shores, MSN, CNM
Director, Division of Midwifery
Magee-Womens Hospital of UPMC
Minimally Invasive Gynecologic Surgery

“Our skilled and compassionate surgeons deliver expert care in a welcoming and comfortable setting. Our goal is to help women feel better — and improve their quality of life — using the least invasive procedures possible.”

-Suketu Mansuria, MD
Associate Director, Minimally Invasive Gynecologic Surgery
Magee-Womens Hospital of UPMC

If you have a gynecologic condition that requires an operation, minimally invasive surgery may be the right option for you. Compared to traditional procedures, minimally invasive surgery is generally preferred because patients usually return to work sooner, experience less pain after surgery, have less scar tissue formation, and have smaller skin incisions.

Our highly trained surgeons use the latest laparoscopic and hysteroscopic technologies to treat a wide range of gynecologic conditions — including complex and difficult to treat cases — such as:

- Abnormal bleeding (heavy periods)
- Endometriosis
- Fibroid tumors
- Incontinence
- Infertility
- Ovarian cysts
- Pelvic organ prolapse
- Pelvic pain

Same-Day Hysterectomy
Our use of state-of-the-art technology means Magee-Womens Specialty Services at UPMC Passavant–Cranberry can offer women same-day laparoscopic hysterectomy as a minimally invasive procedure.

With outpatient hysterectomy, our surgeons make just four quarter-inch size incisions in the abdomen. This allows you to go home the same day, and recovery time is typically two weeks. Traditional surgery involves two large incisions, with an average six-week recovery time for most patients.
Reproductive Endocrinology and Infertility

“For couples unable to conceive a child, in vitro fertilization offers more hope for a successful pregnancy than ever before.”

- Joseph Sanfilippo, MD
  Division Director, Center for Fertility and Reproductive Endocrinology
  Magee-Womens Hospital of UPMC

If you’ve experienced problems getting pregnant, you’re not alone: it is estimated that as many as one in five couples in the United States has infertility issues. Depending upon your age, infertility is defined as the inability to become pregnant after having unprotected intercourse for six months to one year.

We offer a full spectrum of infertility services for men and women, and we work closely with Magee’s Department of Genetics to provide a comprehensive assessment for couples experiencing infertility.

You’ll receive state-of-the-art care in a warm and empathetic environment. Our specialized services include:

- Fertility preservation
- In vitro fertilization (IVF)
- Intracytoplasmic sperm injection (ICSI)
- Oocyte cryopreservation
- Ovulation induction
- Preconception counseling
- Preimplantation genetics
- Third-party reproductive services
- Tubal reversal
Urogynecology Services

Women of all ages can experience bladder and pelvic floor disorders, including problems with bladder and bowel control. Although such problems are more common with advancing age, even young women can be affected.

Childbirth, heavy lifting, the effects of menopause and aging, and some chronic medical and neurologic conditions can weaken the pelvic floor, causing leakage of urine or stool, difficulty with bowel movements, and pelvic pain or pressure. Discomfort and embarrassment resulting from these disorders can lead to depression, social isolation, and avoidance of physical and sexual activity.

If you’re experiencing any of these problems, our urogynecology specialists can help restore your confidence and active lifestyle. We use the most current research and clinical standards to diagnose and treat pelvic floor disorders and other urogynecologic conditions.

Urogynecologic Conditions Treated

- Chronic urinary tract infections
- Dropping of the uterus, bladder, rectum, or intestine
- Fecal incontinence (passing of gas or stool involuntarily)
- Overactive bladder symptoms
- Pelvic organ prolapse (weakening of the pelvic muscles)
- Pelvic pain
- Urinary incontinence (leaking of urine)
- Voiding disorders, such as urinary retention

“Our goal is to restore function and improve quality of life for women. We’re pleased to bring our individualized urogynecology services to women in Pittsburgh’s northern communities.”

-Halina Zyczynski, MD
Division Director, Urogynecology
Magee-Womens Hospital of UPMC
